Trend > Internet of Everything

The Internet of Everything Connects the Unconnected

IoE brings together **people, process, data, and things** to make networked connections more relevant and valuable than ever before—turning information into actions that create new capabilities, richer experiences, and unprecedented economic opportunity for businesses, individuals, and countries.

Trend > Internet of Things > Ecosystem

Exhibit 2: The IoT Ecosystem

The overall IoT market will be divided among Enablers, Engagers, and Enhancers. These three kinds of companies will interact, working together to provide the technology and services needed by all—both to market the IoT and to deploy it for their own operations.

Internet of Things > 2014

Exhibit 3: IoT E-Health Offerings, 2014

Although there are many e-health offerings, they are all emergent. The space is ripe for transformation by an Enhancer that can turn information from connected health services and outside data providers into new, value-added services. For Enhancers, partnering successfully with a variety of companies will be a key capability.

Endpoints and Simple Hubs

Tracking devices

- Fitness trackers like Fitbit, Jawbone UP, ActiveLink
- Nutrition trackers like Weight Watchers, MyFitness Pal
- Insulin trackers like Lilly Diabetes monitors
- Internet-connected refrigerators from LG, Haier, and Whirlpool

Integrating Hubs

Quantified self

- Wearable multipurpose devices like Google Glass, Apple Watch
- Smartphone apps for fitness and activity tracking

Social Media (via Network and Cloud Services)

Online communities

- Athletic communities like Strava Social
- Health and weight-loss communities like MyNetDiary

Enhanced Systems

E-health payors

- Aetna and other health insurance companies offering online support

Apple WATCH Coming Soon

Explore 

New platform.
New possibilities.

With its powerful technologies and convenient accessibility on the wrist, Apple Watch opens up exciting opportunities for apps. WatchKit gives developers all the tools they need to create experiences designed specifically for Apple Watch.

[Learn more about WatchKit >](#)

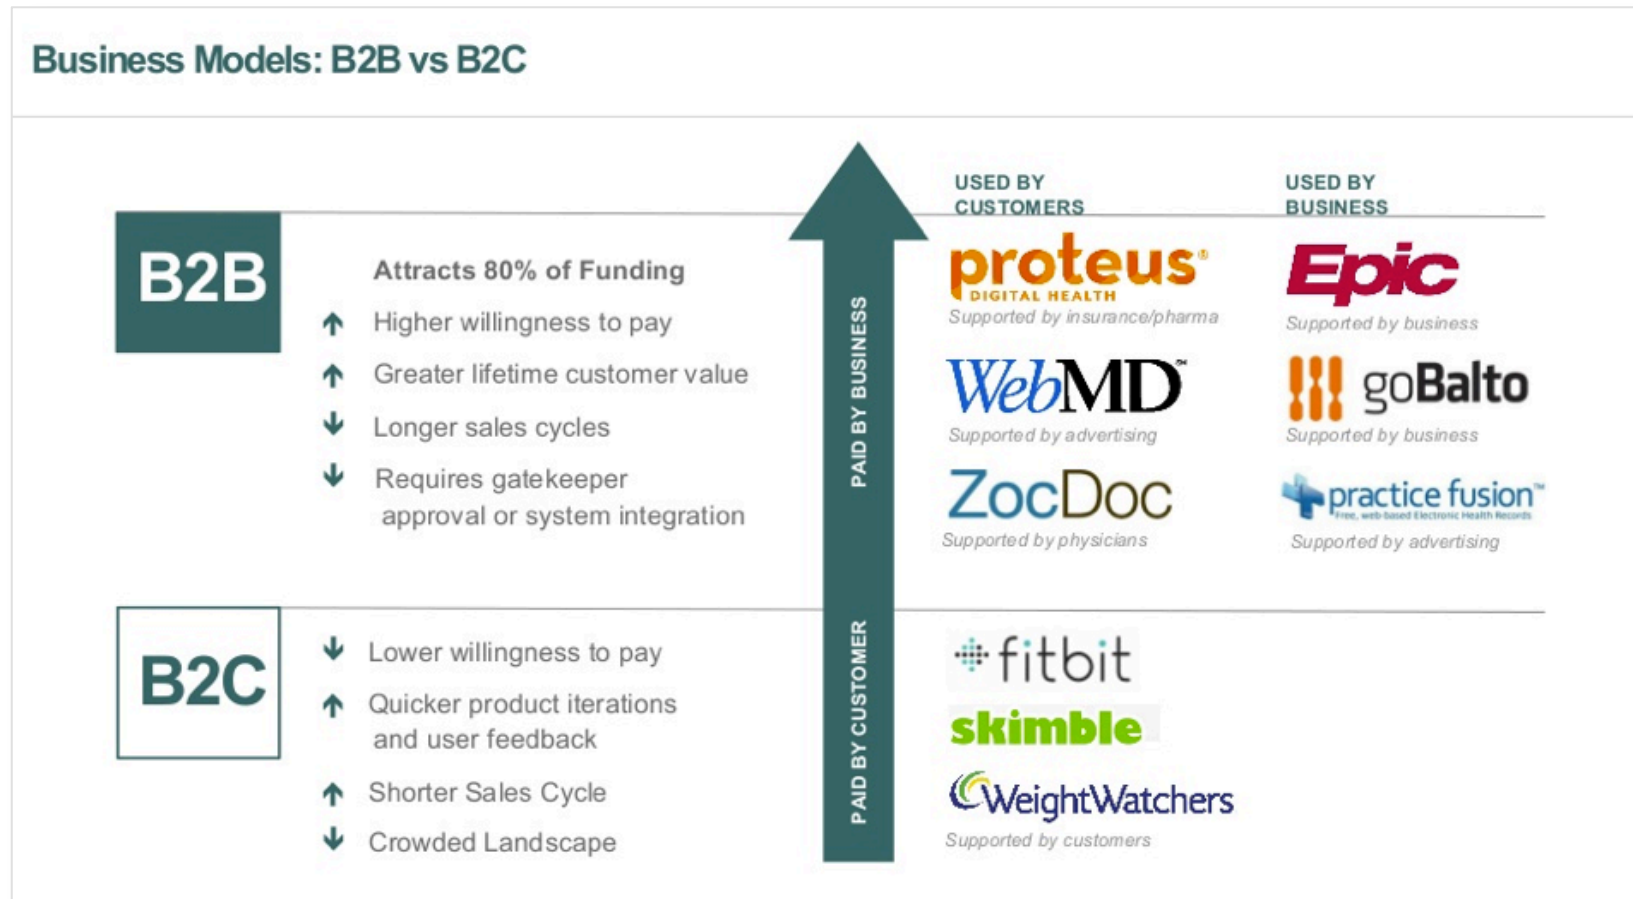

The iPhone screen displays the AAAdvantage app interface for user Aled Evans. It shows a mileage balance of 116,789, a notification for 3 upcoming trips, and details for a flight from LHR to JFK on Friday, April 24, 2015, at 5:00pm from Gate 42. A 'Check In' button is visible. Below this, it lists another flight from DFW to ORD on Monday, May 18, 2015, and a business trip to New York on Thursday, June 11, 2015. The Apple Watch screen shows a simplified view of the trip details for LHR to JFK, indicating it is 'On Time' and departing at 5:00pm on Friday, April 24, 2015, with columns for Gate, Term, and Seat.

TIME

Never Offline.

The Apple Watch is just the start.
How wearable tech will change
your life—like it or not

BY LEV GROSSMAN
AND MATT VELLA

TIME Photo illustration: Heidi Miles, Lupaia, Alamy

So how will this change the practice of medicine > and where should innovation focus

HCPs will have 24/7 access to their entire practice with data provided by all the inputs that were described earlier

as a result the practice of medicine moves from;

from episodic to continuous

from condition to prevention

from hospital to home

from average to individual

from doctor to extended care team

**from mundane data collection to a
focus on consulting value – i.e. treatment
planning / activation / adherence
observation / ongoing management**

So how will this change the practice of medicine > and where should innovation focus

HCPs will have 24/7 access to their entire practice with data provided by all the inputs that were described earlier

as a result the practice of medicine moves

**HCP >
CEO**

“Technology may replace up to
80% of what doctors do”

— **Vinod Khosla** —
Founder at Khosla Ventures

So how will this change the practice of medicine > and where should innovation focus

Patients will have 24/7 access to their data,
care plans, healthcare team

as a result the patient view of healthcare
moves from;

from episodic to continuous

from condition to prevention

from hospital to home

from average to individual

from doctor to extended care team

**from passive recipient to activated
manager of their health**

So how will this change the practice of medicine > and where should innovation focus

Develop or partner with industry to create the sensors / devices / apps that will deliver data to the Patient / Caregiver / HCP > before visit / during visit / after visit

Partner with other businesses to obtain additional data to enhance the clinical experience

Provide dashboards to help visualize this data making it meaningful and actionable

Provide BI that optimizes diagnosis and/or treatment decisions

Open communication / collaboration opportunities with other HCPs based on patient needs

Provide programs that allow HCPs to benchmark their practice – and provide contextual education based on existing gaps

Summary > Key Lesson Learned > Partner >

Pharma / OTC / CPG / Association / Government /
Pharmacy / Insurer / Home Care / etc.

- ✓ Incumbent advantage
 - ✓ Know the industry better than companies from other sectors
 - ✓ Know the regulatory requirements
 - ✓ Know the stakeholders
 - ✓ Know the payment systems / revenue models
 - ✓ Know the conditions and medications
-
